DOES "NOT TOUCH" VEHICLE SIDE
3 YEAR WARRANTY
AGAINST BREAKAGE

THE BEST GATE YOU WILL OWN

*pops open away from your vehicle
does not touch vehicle side*

1. The patented pressure release mechanism allows the gate to "pop" open faster than you bump into it.
2. The electrically conductive rubber bumper sleeve has a cushioning effect while still maintaining a completely electrified gate.
3. The electrically conductive fiberglass extension can be adjusted to give the gate an overall length of 10 feet to 16½ feet simply by pulling it out with pliers or pushing it in. It is also very flexible and durable.
4. The 'Forever Flex' tip made of soft PVC plastic is molded to the fiberglass rod. It has soft fingers that are designed to push themselves out of crevices and snags if they make contact.
5. The patented 'Wind Gust Damper' "locks" the gate shut quickly once a vehicle is through. It also keeps the gate from swaying in strong wind.
6. The gate is insulated from the post with an insulator back. The gate is easily installed using the two lag bolts and special insulator bushings supplied. Also supplied are useful hints and tips on the gate and electric fencing. Ecklund has 30 years' experience in electric fencing.

This combination of features makes a gate that is simple, easy to use, effective and attractive - designed to give many seasons of dependable use and guaranteed for 3 years against breakage. The gate simply pops open faster than you bump into it and closes automatically behind you.
